About

I'm an aspiring Data analyst, which is why I enrolled with the University of Cape Town studying Data analysis after graduating BCom Information Systems. I am determined to work hard and learn as much as I can in the early years of my career. I'm looking forward to joining a driven and innovative team.

What attracted me to the course is the shift in the world, where everything is becoming technological (4th Industrial Revolution), I thought "you can never beat technology, but you can become a part of it". I've grown to love and enjoy IT ever since.
